

For over 20 years, I have focused my career on one main goal: training the next generation of Intraoperative Neuromonitoring (IOM) technologists to provide the best possible patient care. I truly believe that our field is only as strong as the education we give our technologists. That is why I have spent my career building training and mentoring programs for five major IOM companies, creating a successful CNIM Prep Program, and personally teaching more than 200 technologists right in the operating room.

My path started in the OR. I quickly realized how much I loved helping others learn, so I started putting together training binders to help new hires. That hands-on project turned into a leadership role, and today, I serve as the Director of Education and Training for USNeuro. Whether it is clinical instruction, advanced training, or hands-on troubleshooting, my focus is always on giving technologists the skills and confidence they need to succeed.

I also believe in giving back to the wider IOM community. I have written chapters for a leading IOM textbook and actively serve on the education committees for both the ASNM and ASET. For me, education isn't just a job title—it is a lifelong passion for making surgeries safer by helping technologists grow.

On the personal side, I live in the Chicago suburbs with my wife and 3 kids. We are a busy family with tennis, hockey, football, and music. I am a huge hockey fan following the Red Wings and Golden Knights.
