

Personal Statement

I am honored to submit my candidacy for the American Society of Neurophysiological Monitoring (ASNM) Board of Directors. Throughout my career as an intraoperative neurophysiologist, I have been driven by a commitment to patient safety, clinical excellence, and the advancement of our profession. The opportunity to serve as a patient's advocate in the operating room, helping protect neurological function during complex surgical procedures, has been both a privilege and a responsibility that continues to inspire my work every day.

Over the years, I have developed extensive experience in intraoperative neuromonitoring across a broad range of complex procedures, including spine surgery, cranial tumor resections, cerebrovascular surgery, and functional neurosurgery. These experiences have strengthened my clinical expertise and reinforced the importance of collaboration among neurophysiologists, surgeons, anesthesiologists, and the broader healthcare team. In addition to my clinical responsibilities, I have been deeply committed to mentoring colleagues, sharing knowledge, and supporting the professional development of emerging neurophysiology professionals.

Throughout my career, I have been passionate about contributing to the advancement of neurophysiology through research, publication, and education. As an author and co-author of numerous peer-reviewed publications, and scientific presentations, I have focused on sharing clinical experience, promoting evidence-based practice, and advancing the understanding of intraoperative neurophysiological monitoring. These scholarly contributions have allowed me to engage with colleagues across the field and reinforce my belief that research, education, and clinical excellence must work hand in hand to move our profession forward.

ASNM has played a critical role in advancing our field through education, advocacy, research, and the promotion of high clinical standards. As our profession continues to evolve, I believe it is essential that we remain focused on strengthening educational opportunities, supporting workforce development, encouraging member engagement, and demonstrating the value of neurophysiological monitoring in improving patient outcomes. These priorities are particularly important as we navigate the challenges and opportunities facing our profession in an increasingly complex healthcare environment.

If elected to the Board, I will bring the perspective of an experienced practicing neurophysiologist, educator, mentor, and active contributor to the scientific literature. I am committed to listening to our members, fostering collaboration, supporting initiatives that advance clinical excellence, and helping ensure that ASNM continues to be a strong and influential voice for our profession.

ASNM has contributed significantly to my professional growth, and I welcome the opportunity to give back through service and leadership. It would be an honor to serve on the Board of

Directors and work alongside fellow members to advance our shared mission of promoting excellence in neurophysiological monitoring, supporting our professional community, and improving outcomes for the patients we serve.
